Professional Summary

Cyber Security undergraduate specializing in cyber security. Strong hands-on experience in reconnaissance, exploitation, and security assessment reporting. Experienced in building proof-of-concepts, vulnerable labs, and offensive security tools. Passionate about offensive security, SOC operations, and real-world threat analysis. Seeking a Cybersecurity Intern role.

Education

Sri Lanka Institute of Information Technology (SLIIT) 2024 – 2027
BSc (Hons) in Information Technology, Specialization in Cyber Security *GPA: 3.31/4.0*

St. Aloysius' College, Galle
GCE Advanced Level – Science Stream

Technical Skills

Core Offensive Skills:	Web Application Penetration Testing | Vulnerability Assessment | Reconnaissance | Exploitation | Proof-of-Concept Development | OWASP Top 10
Tools:	Burp Suite | Nmap | Metasploit | Sublist3r | Hashcat | John The Ripper
Languages	PHP | JavaScript | C/C++ | Bash | SQL
	Linux | Apache | GitHub | MySQL | HTML | CSS | VS Code

Professional Projects & Security Research

FreebieGamesFinder – Malicious Browser Extension Proof-of-Concept

github.com/InoshMatheesha/FreebieGamesFinder-Extension

- Developed a malicious Chrome extension Proof-of-Concept demonstrating covert data exfiltration via permission abuse.
- Implemented delayed execution, Base64-encoded endpoints, and persistent background workers.
- **Technologies:** JavaScript, Chrome Extension APIs, Manifest V3, HTML, CSS

SecureShop CTF – Intentionally Vulnerable E-Commerce Platform

github.com/InoshMatheesha/SecureShopCTF

- Built a deliberately vulnerable web app with multiple OWASP Top 10 issues for hands-on training.
- Published as a public lab on TryHackMe: tryhackme.com/room/SecureShop
- **Technologies:** PHP, MySQL, JavaScript, Docker, Apache

ClassDojo Web Application Security Assessment (Bug Bounty Report)

Bug Bounty Research

- Conducted a full black-box penetration test using real-world bug bounty methodology including reconnaissance, scanning, manual exploitation, and verification.
- Identified 3 critical and 1 medium severity vulnerabilities affecting production infrastructure, potentially enabling full server compromise.
- Produced a 39-page penetration testing report containing proof-of-concept demonstrations, risk ratings, and remediation recommendations.

Technologies: Kali Linux, Nmap, Burp Suite, Nikto, Amass, Sublist3r, Shodan
